github.com/johndoe

Results-driven Software Engineer with 3 years of experience in JavaScript development. Transitioning from a frontend-focused background to specialize in backend engineering. Proficient in architecting scalable server-side applications using Node.js, Express, and MongoDB. Strong track record of optimizing application performance and designing clean, maintainable RESTful APIs. Committed to writing high-quality code and implementing backend best practices.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Backend: Node.js, Express.js, RESTful APIs, GraphQL

Databases: MongoDB (Mongoose), PostgreSQL, Redis

Tools & DevOps: Git, Docker, Postman, Jest, AWS (S3, EC2)

PROFESSIONAL EXPERIENCE

Techflow Solutions

Jan 2021 – Present

Software Engineer

- Lead the development of several internal Node.js scripts that automated data migration processes, reducing manual entry time by 40%.
- Collaborated closely with the backend team to architect and consume REST APIs, gaining deep insight into server-side logic and database design.
- Refactored legacy JavaScript codebases to modern ES6 standards, improving application maintainability and performance.
- Built and maintained reusable UI components while ensuring seamless integration with MongoDB-driven backend services.
- Participated in code reviews focusing on security and performance bottlenecks in the Express.js middleware layer.

BrightSide Web Agency

June 2019 – Dec 2020

Junior Developer

- Developed responsive web applications using JavaScript and modern frameworks.
- Contributed to the development of a custom CMS backend using Node.js and Express, facilitating content updates for over 20+ clients.
- Optimized database queries in MongoDB to improve page load speeds by 25%.

- Managed version control using Git and assisted in the deployment of applications to staging environments.

KEY PROJECTS

E-Commerce API Service

Designed and implemented a robust backend for an e-commerce platform using **Node.js** and **Express**. Integrated **MongoDB** for product and user data management, implemented JWT-based authentication, and structured **RESTful endpoints** for cart and order processing. Tested using Jest and Supertest.

Real-time Task Manager

Built a server-side application focused on real-time task collaboration. Utilized Node.js and WebSockets for live updates and used MongoDB for persistent storage. Focused on creating a scalable architecture capable of handling concurrent connections.

EDUCATION

Bachelor of Science in Computer Science

University of Technology | 2015 – 2019
